

WEB VAPT EVIDENCE FILE DOCUMENTATION

Passive-Recon-p3.png

Field	Details
Project	Enterprise Security Assessment Lab
Module	Sub-Project 1 - Web Application VAPT
Evidence Row	29 - Passive Recon
Evidence File	Passive-Recon-p3.png
Result Type	Recon evidence
Prepared For	GitHub portfolio documentation

Document Purpose

This PDF documents one specific evidence file from the Web VAPT evidence table. It embeds the actual screenshot, explains what the screenshot proves, maps it to the methodology, and records professional interpretation, risk, remediation, and redaction guidance for GitHub publication.

1. Embedded Evidence Screenshot

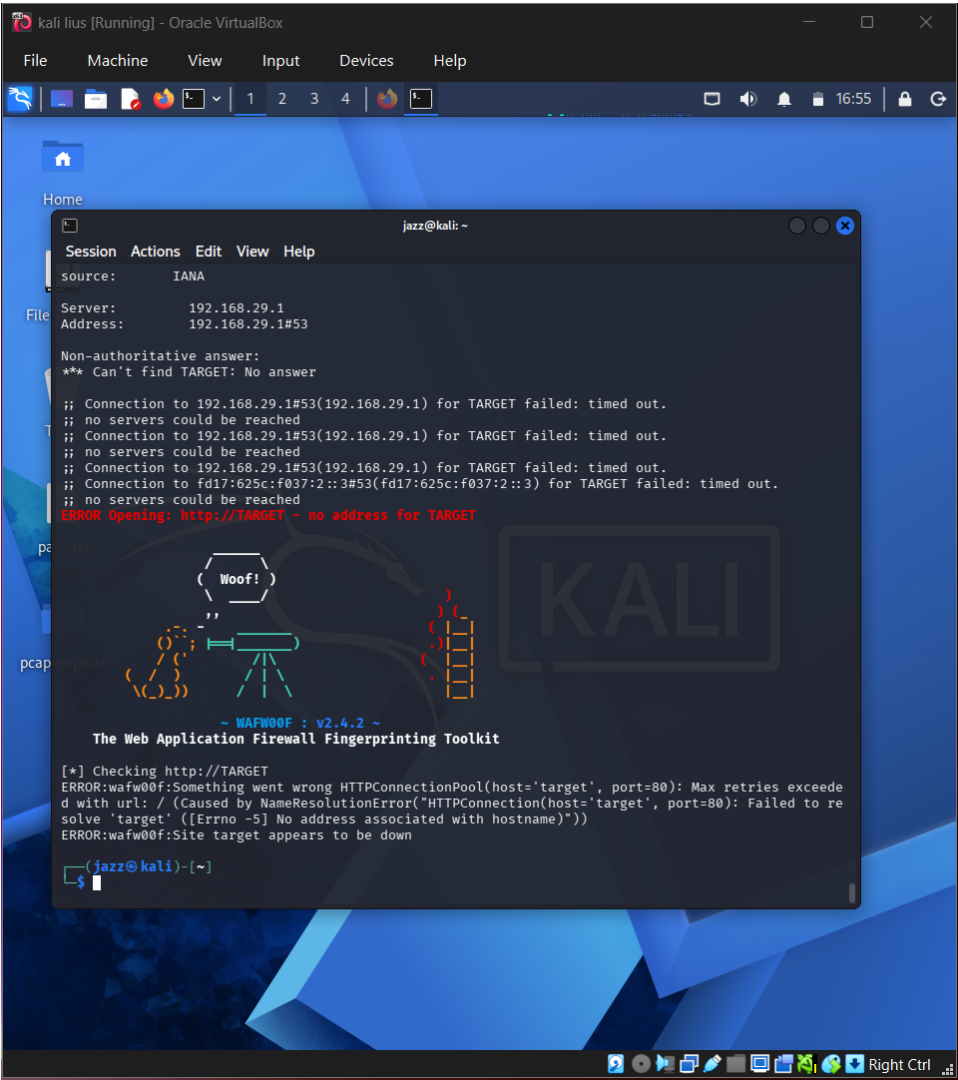

Figure 1 - Actual screenshot evidence: Passive-Recon-p3.png

What this screenshot proves

The screenshot supports the passive reconnaissance evidence set and shows continued terminal-based recon workflow.

2. Evidence Context

Area	Value
Testing Phase	Passive Reconnaissance - Continued Output
Tool / Component	Passive recon utilities
Objective	Provide additional evidence of passive recon workflow and output review.
Result Type	Recon evidence

3. Command / Workflow Used

Continue passive recon review and save findings to notes/output files

The commands or workflow above represent the evidence-producing action. Placeholders such as , , or should be used in public documentation instead of live secrets or private infrastructure details.

4. Professional Interpretation

The screenshot supports the passive reconnaissance evidence set and shows continued terminal-based recon workflow.

This evidence should be treated as a supporting artifact, not as a standalone finding by itself. In a professional report, the screenshot supports a specific testing phase, validates an observation, and strengthens reproducibility when paired with methodology and remediation guidance.

5. Security Risk / Why It Matters

Recon output should be clearly labeled to avoid confusion between placeholder/training data and real scoped assets.

For this portfolio project, the risk is described in a real-world context while clearly noting that the target was an authorized DVWA/local lab environment. This avoids exaggerating lab results as production impact.

6. Recommended Remediation / Defensive Control

Document scope, target type, command purpose, and final interpretation for every recon screenshot.

7. GitHub Redaction Requirements

Real public records, emails, IPs, domains, and personal data.

Before pushing to GitHub, confirm that screenshots do not expose cookies, session IDs, credentials, hashes, cracked passwords, private IPs, internal file paths, or any secret values. If the screenshot already contains sensitive information, blur or crop it before upload.

Legal and Ethical Note

This evidence documents authorized testing against an intentionally vulnerable local lab target. The techniques described must not be used against public or third-party systems without explicit permission.
